VP OF ENGINEERING · AI NATIVE SOFTWARE DELIVERY · SECURITY & CLOUD PLATFORMS

EXECUTIVE SUMMARY

20+ years leading elite engineering orgs, scaling mission-critical platforms and shipping breakthrough products in security, cloud and FinTech. Most recently unified six security products into a $500M+ agentic SaaS platform serving half of the Fortune 100, and cut production feature cycle time by 50% via AI-native SDLC transformation across a global 200+ engineering org. Track record spans hypergrowth scale-ups and enterprise transformations: tripled ARR to $60M via product-led pivot as FinTech CTO, sustained DORA elite rigor on a hyper-scale AI security platform processing billions of daily events.

TECHNICAL FOUNDATION

Platforms: Cloud-Native SaaS · APIs & Microservices · Event Driven Systems · Data/ML Pipelines · Agentic AI Harnesses

Product Domains: Software and Cloud Security · Agentic AppSec · Developer Platform · FinTech · Enterprise SaaS

PROFESSIONAL EXPERIENCE

Black Duck Software (formerly Synopsys Software Integrity Group) — 2020 – 2026

Head of Engineering

Led global engineering for the flagship Application/Cloud Security products and unified DevSec platform powering a $500M portfolio with 5,000+ customers - drove AI accelerated delivery and product scaling in emerging + agentic security frontiers.

- **Unified six fragmented AppSec products** into Polaris SaaS ASPM platform serving 1 billion+ API requests daily - enabled the developer security product pivot powering 25%+ YoY ACV growth, serving a million-developer ecosystem.
- **Co-led Signal AI security product build-out** with agentic detect-triage-remediate workflows, MTTR reduction to hours, AI SDLC security and open weight LLM risk posture – drove technical vision/roadmap/customer 0-to-5 adoption.
- **Built the agentic platform across Coverity/Black Duck/Polaris** products with multi-model inferencing, eval harness, policy/HIL guardrails, cost limits, hybrid RAG, and a security knowledge graph running on petabyte data pipelines daily.
- **Drove 0-to-1 product releases** in software supply chain, cloud Infra, container and AI security, alongside OEM market expansion with SIEM, CNAPP and CSPM partners – resulting into a $350M ARR AppSec-CloudSec product line.
- **Cut feature cycle time to prod by 50% globally via AI-native SDLC transformation** using engineer-orchestrated agentic dev and CI/CD loops, 60% AI generated code with 20% rework rate, weekly pruned context/skills/hooks & MCP registry.
- **Re-architected monolithic security engines** into API-first cloud-native core services, improving scan latency by 30% and result quality (precision/false positive rates) across IDE, SCM and CI/CD workflows in hybrid cloud deployments.
- **Sustained DORA elite rigor scaling a fast-paced 200+ engineering org** across Americas/EU/Asia - developed leaders who own outcomes, mentored autonomous pods driving multi deployments/day, <5% change failure rate, 99.95% SLO.

Tech: *GCP & AWS Services, Kubernetes, Temporal · Kafka, Flink, Postgres, Neo4j, Iceberg, Redis · Claude, OpenAI, Llama, Langfuse, LangGraph, LlamaIndex, Gravitee, PyTorch, vLLM · React, GraphQL, gRPC, REST · LinearB, Harness, GitOps*

Info Image — 2012 – 2018

Chief Technology Officer

Drove engineering and product execution of a business pivot from basic bank data processing to value-added FinTech in embedded finance. Led the startup through 0-to-1, product-market-fit and scale-up phases with full technology ownership.

- **Tripled ARR to $60M over five years** by repositioning the company from services-led to product-led FinTech SaaS provider, monetizing regulated financial data through ML-powered products.
- **Architected a multi-tenant, secure Data-as-a-Service platform** that unlocked actionable insights and intelligent workflow on financial data previously siloed within regulated ecosystem.
- **Reduced customer operating costs by up to 25%** by delivering ML-powered automation in transaction classification, risk scoring, anomaly detection across product, personalization and compliance workflows.
- **Scaled the engineering team from 15 to 60+ globally -** established career growth paths, DevOps culture and continuous delivery discipline with OKR driven accountability tied to production outcomes.

- **Managed regulatory compliance** for SOC2 Type II, PCI DSS, GLBA, Model Risk Management and ISO 27001.

Tech: *Java, Python, JavaScript, React; AWS, Kubernetes, Linkerd; Kafka, Spark, Airflow, HBase, Postgres, Redis; TensorFlow, Keras.*

Citrix Systems **2009 – 2011**

Senior Director, Cloud Platforms

Led cloud platform strategy across business unit - unifying provisioning, observability, and consumption telemetry into a common platform fabric. Scaled engineering (0 to 40+) across US, EU, and India through a period of hypergrowth.

- **Reduced enterprise onboarding time up to 40%** by shipping a self-service control plane and cloud APIs that replaced manual provisioning for channel partners.
- **Delivered a SaaS operating fabric** spanning virtualization, networking, and cloud products on a common orchestration backbone, with integrated monitoring, usage analytics and metering - supporting 5,000+ enterprise customers.
- **Executed a two-year roadmap** powering the launch of Citrix Ready partner program, which unlocked $50M+ in recurring multi-product revenue across EMEA and the Americas.

PNC Financial Services **2005 – 2008**

Vice President, Software Engineering

Transformed a solutions-centric engineering workforce into a 50-person software product organization, delivering a modern brokerage platform across PNC's retail and institutional channels.

- **Migrated 20+ legacy applications** to an API-first, distributed architecture - reducing infrastructure footprint by 30%.
- **Reduced customer-impacting latency incidents by 80%** on a high-throughput real-time market data platform.
- **Accelerated release cycle from quarterly to monthly** with autonomous squads owning E2E platform delivery.

Earlier Career Experience | Systems Integrator Roles **1998 – 2004**

Architect, Riverton Corporation (2002 – 2004)

Technical Lead, Razorfish (2000 – 2002)

Delivered enterprise integrations, e-commerce systems, and mission-critical data platforms for Fortune 500 clients – including ***Microsoft, Sprint, TD Bank, Gillette, Orbitz, Staples, Biogen, and Blue Cross Blue Shield.***

- Built the industry's first internet-scale dynamic travel packaging platform for Orbitz.
- Delivered enterprise integration platform for Gillette and real-time B2B data exchange network for Sprint.
